

Sound Insulation Prediction Software

Updating the USB Key

Assuming you have already downloaded and installed version 6.4 then start INSUL. You will see this message:

Click OK and INSUL will start in Demo mode. Now click on the button on the toolbar that has a picture of a key. You will see the screen below.

Save the key information to a file by clicking on the button labelled "Save Key Information to file" and email this c2v file to your distributor. The distributor will email back a v2c file to update your key to 6.4. Use INSUL again and click on the key button again and this time use the "Update Key from File" to read in the v2c file that was sent to you. You will now need to re-start INSUL.
